Subject: TFMPP

Hi Peter,

Talked with Sonja, she had TFMPP (Triflouromehtylphenyl piperazine) in some of her MDMA's. HP 1MS gave the best separation about 12 seconds. GC condition are 120 degrees for 2.50 minutes then ramp @ 10 degree/min to 280. MDMA elutes @ around 8 minutes, with TFMPP eluting right before. Try this site for info.
